Staphylococci in human disease (Book, 2009) [WorldCat.org]

Staphylococcus aureus bacteremia (SAB) is an important infection with an incidence rate ranging from 20 to 50 cases/100,000 population per year. Between 10% and 30% of these patie

Staphylococci in Human Disease, Second Edition | Request PDF

Staphylococci continue to be the leading cause of many human infections. Along with *S. aureus* and other coagulase-positive strains, whose pathogenicity and mechanisms of virulence are well elucidated, the coagulase negative species has recently garnered more attention. Albeit less virulent than coagulase-positive isolates (they express a restricted number of virulence factors), nowadays they are the most prevalent microorganisms within the genus, particularly in hospital settings, where ...

germs commonly found on the skin or in the nose of even healthy individuals. Most of the time, these bacteria cause no problems or result in relatively minor skin infections.

Staph infections - Symptoms and causes - Mayo Clinic

Description : Pet-to-Man Travelling Staphylococci: A World in Progress explores Staphylococci, a dangerous pathogen that affects both humans and animals with a wide range of infection states. This bacteria can spread rapidly as a commensal organism in both humans and pets, and is an agent of disease.

The Staphylococci In Human Disease | Download eBook pdf ...

Bacteria in the genus *Staphylococcus* are pathogens of man and other mammals. Traditionally they were divided into two groups on the basis of their ability to clot blood plasma (the coagulase reaction). The coagulase-positive staphylococci constitute the most pathogenic species *S. aureus*.

Staphylococcus - Medical Microbiology - NCBI Bookshelf

Staphylococcus Aureus and Disease. *Staphylococcus aureus* (*S. aureus*) is one of the leading causes of infections acquired in the community and after surgery or hospital. Around 30% of individuals carry *S. aureus* in their nose, pharynx or back of throat and on their skin.

The staphylococci in human disease - Ghent University Library

1. Introduction. Coagulase-negative staphylococci (CNS) are normal inhabitants of human skin and mucous membranes. They were first described in 1884 by Rodenbach as *Staphylococcus albus*, an avirulent staphylococcus. They have long been dismissed as culture contaminants, even in type 1 samples (samples obtained from a normally sterile site by needle aspiration or surgery).

Role of coagulase-negative staphylococci in human disease ...

Staphylococcus can cause a wide variety of diseases in humans and animals through either toxin production or penetration. Staphylococcal toxins are a common cause of food poisoning, for they can be produced by bacteria growing in improperly stored food items. The most common sialadenitis is caused by staphylococci, as bacterial infections.

Staphylococcus - Wikipedia

Staphylococcus aureus [staf I lō-kok is aw ree us] (staph), is a type of germ that about 30% of people carry in their noses. Most of the time, staph does not cause any harm; however, sometimes staph causes infections.

Staphylococcus aureus is a Gram-positive, round-shaped bacterium that is a member of the Firmicutes, and it is a usual member of the microbiota of the body, frequently found in the upper respiratory tract and on the skin. It is often positive for catalase and nitrate reduction and is a facultative anaerobe that can grow without the need for oxygen. Although *S. aureus* usually acts as a commensal of the human microbiota it can also become an opportunistic pathogen, being a common cause of skin inf
